

Split Inground Light Installation Instructions

Product Specifications			
Model No.	HV1842T	HV1842T-240V	HV1842RGBW
Name	Split		
Material	316 Stainless Steel		
Colour	Stainless Steel		
Installation Type	Ground - Recessed		
IP Rating	IP67		
IK Rating	IK10		
Input Voltage	12v DC Constant Voltage - External Power Supply Required	240v AC	12v DC Constant Voltage - External Power Supply Required
Protection Class	3 (Low Voltage, no earth required) ⚡	1 (Earth Required) ⚡	3 (Low Voltage, no earth required) ⚡
Lamp Base	Built In LED		
Lamp Wattage	1x 5w		
Colour Temp	TRI Colour - 3000k, 4000k, 5500k		RGBW (RGB + 3000K)
Lumens	400lm, 430lm, 450lm		195lm (3000k)
CRI	> 80		
Wiring	Parallel		
Dimmable	No	Yes	Yes with RGBW Controller
Warranty	3 Years Replacement*		

Important Safety Issues:

- This product must be installed by a qualified electrician according to AS/NZS 3000.
- Ensure all electrical mains are disconnected before any installation.
- Modification of this product will void any warranty.
- Havit Lighting does not take responsibility for wrong installation, incorrect use, or use of installation material that does not belong to the system.
- When installing low voltage fittings, Voltage to fitting must be within +or- 5% of voltage required, if not within this allowance warranty will be voided.
- Aluminium and 304SS fittings must not be installed within 5km of any salt water environments.
- All 316 stainless steel fittings must have regular cleaning maintenance to avoid any tea staining from forming on fitting. (Warranty does not cover Tea Staining)
- All o-rings and seals must be in place correctly to maintain warranty
- When installing inground light fittings, Adequate drainage must be allowed to prevent fittings from sitting in water for a long period of time, if no drainage is allowed, Warranty will be voided,
See sample adequate drainage diagram for correct installation method.
- These fittings are supplied with an anti-syphon plug, This must remain on cable for warranty to be valid
- These fittings are supplied with a male + female connector for ease of replacement if fitting was to fail., This must remain on cable for warranty to be valid This form may be updated at any time due to product improvements, please check online installation form for most current version.

Dimensions

Adequate Drainage

Steps for Installation: HV1842T + HV1842T-240V

- Make sure that the electrical circuit is free of voltage (master switch off)
- Make a hole where fitting is to be placed using dimensions provided on line drawings, making sure adequate drainage is allowed.
- Insert canister, and ensure that the top is level with ground or floor. Failure to do so will void warranty.
- HV1842T-240V - Use wire with earth; connect the earth first, then live and neutral wire
- HV1842T - Using an appropriate 12v DC Constant Voltage LED Driver - DO NOT CONNECT LIGHT FITTING DIRECTLY TO 240V (Fittings are polarity sensitive, If connected incorrectly, Fittings will fail and will void warranty.)
- To connect the cable, strip back cable on both fitting and cable run and twist the earths together first for 240v model, then positive cables from fitting to positive on the cable run. Then connect neutral cables from fitting to neutral on cable run.
- Solder all joins using solder and either a heat gun or butane gas torch.
- Cover connections using an adhesive lined heat shrink or gel cap to make connection watertight. Failure to do this will void warranty.
- Heat the heat shrink or crimp the gel cap making sure all connections are covered.
- Make sure the seals are still in place and nuts are tight to avoid any water penetration.
- Fitting is preset to 3000k, To change locate switch on bottom of fitting inside sealed brass cover, move switch to desired colour temperature and reattach cover making sure its tight.
- Tighten cable gland on bottom of fitting before inserting fitting into canister
- Insert fitting into canister. Apply silicon around edge of fitting to prevent any water from getting inside to electrical connections.
- All connections must be carried out carefully, inspect all contacts before switching back on the electric circuit.

Steps for Installation: HV1842RGBW

- Make sure that the electrical circuit is free of voltage (master switch off)
- Make a hole where fitting is to be placed using dimensions provided on line drawings, making sure adequate drainage is allowed.
- Insert canister, and ensure that the top is level with ground or floor. Failure to do so will void warranty.
- Connect the cable -
- Use an appropriate 12v DC LED Driver and RGBW LED Controller- DO NOT CONNECT LIGHT FITTING DIRECT TO 240V
- Strip back the cable on both fitting and cable run and twist cable together making sure all colours are correctly joined to the correct colour - Check label on cable to determined what colour is for each cable
- Solder all joins using solder and either a heat gun or butane gas torch.
- Cover connections using an adhesive lined heat shrink or gel cap to make connection watertight. Failure to do this will void warranty.
- Heat the heat shrink or crimp the gel cap making sure all connections are covered.
- Connect cable run to RGBW Controller.
- Connect the RGBW Controller to 12v DC LED Driver.
- Tighten cable gland on bottom of fitting before inserting fitting into canister
- Insert fitting into canister. Apply silicon around edge of fitting to prevent any water from getting inside to electrical connections.
- All connections must be carried out carefully, inspect all contacts before switching back on the electric circuit.

Steps for Installation: HV1842-F-SH

- Remove nuts on back of fitting and set aside
- Remove cover and replace with security face
- Reattach nuts and tighten making sure seals are still in place
- Insert fitting into canister
- Insert screws and tighten

Anti-Syphon Plug

Male + Female Connector

Must be installed by a licensed electrician
